### 30 LED Rechargeable Portable Lamp

#### Safety Instructions

#### TECHNICAL DATA –

Battery Power:	NIMH 3.6V 3*1800m AHAA
Luminosity:	18,000 MCD
Charging Time:	4 Hours
Operating Time:	5 Hours
LED Life expectancy	100,000 Hours

**ELECTRICAL CONNECTION** – Verify that the voltage of the battery charger corresponds to that of the system. Use the lamp within the prescribed places and governed under the current regulations relating to the working environment and to the electrical systems. Check that the plug assembled on the cables is suitable to the working environment on the contrary, it must be replaced.

**INSTRUCTIONS FOR THE USE** – Plug into a suitable socket. Always check that the device is efficient and does not present abnormalities that impair safety: do not remove the guards. Do not open the device: maintenance must be performed by skilled personnel only. Should the cable be damaged, it must be immediately replaced with one of the same type, at an authorised service centre or by a qualified electrician. The lamp is supplied with discharged batteries. Plug the lamp into the battery charger, connected to the power supply. Pilot light on the battery charger If the pilot light is fixed red: lamp in recharge; fixed green: charge is complete.

When the light brightness of the LED's dim, the battery needs recharging (When using the in vehicle charger follow the above instructions, NB the green light may not appear to indicate fully charged). When recharging, both the battery charger and the lamp could warm up slightly. The lamp housing placed onto the battery charger must be kept clean. Do not introduce any water, oil – grease, or any metallic objects as they may cause overheating or impair the regular charging of the battery.

To switch the unit on and off use the master switch sited on the back of the lamp. Use a damp towel to clean the lamp. Do not use any other cleaning products. This product is not waterproof or water tight. Do not submerge in water, however it will resist light spray such as rain.

**ACCESSORIES INCLUDED** – AC/DC adapter, magnetic base, recharge base and 12V in-vehicle charge lead

**GENERAL PRECAUTIONS** – The choice and utilisation of the components has been made keeping into account the conditions of use, and the lamp anticipated useful life. No guards or signals may ever be sufficient if the person does not take care of a few precautions, if the lamp is not kept at its best condition and if the recommendations below are not thoroughly followed. Learn how to use it properly before starting a job. Check that the person using the lamp does it safely and that they know how it works. Avoid taking, or making other people take unnecessary hazards. Keep the working area free of any tools and any other unnecessary objects.
